1	Introduction	1-1
1.1	Introduction and Overview	1-1
1.2	Acknowledgment	1-2
1.3	Outline of the Script	1-2
1.4	Suggested Readings	1-5
I	Formal Languages, Automata Theory and Applications	
2	Formal Languages	2-1
2.1	Why Study Formal Languages?	2-1
2.2	Natural and Formal Languages: Basic Terminology	2-2
2.2.1	Syntax	2-2
2.2.2	Semantics	2-3
2.2.3	Grammar	2-4
2.3	Formal Languages and Grammar: Definitions	2-8
2.4	Regular Languages	2-11
2.4.1	Regular Grammars	2-11
2.4.2	Regular Expressions	2-12
2.5	Context-Free Languages	2-14
2.5.1	Backus-Naur Forms	2-15
2.5.2	Grammar Tree	2-18
2.5.3	Parsing	2-18
2.5.4	Ambiguity and Leftmost Derivations	2-20
2.6	Context-Sensitive Languages and Unrestricted Grammars	2-24
2.7	The Chomsky Hierarchy	2-26
2.7.1	Undecidable Problems	2-27
2.8	Chapter Summary	2-28

3 Automata Theory	3-1
3.1 Why Study Automata Theory?	3-1
3.2 Computation	3-1
3.2.1 Definition of Computation	3-2
3.2.2 \mathcal{O} Notation	3-2
3.3 Finite State Automata	3-3
3.3.1 Definition	3-5
3.3.2 State Diagrams	3-6
3.3.3 Nondeterministic Finite Automata	3-6
3.3.4 Equivalence of Deterministic and Nondeterministic Finite Automata	3-8
3.3.5 Finite Automata and Regular Languages	3-9
3.3.6 The “Pumping Lemma” for Regular Languages	3-11
3.3.7 Applications	3-13
3.4 Push-Down Automata	3-14
3.4.1 Parser Generator	3-15
3.4.2 Compiler Compilers	3-16
3.4.3 From yacc to ANTLR	3-18
3.4.4 Understanding Parsing as “Consuming and Evaluating”	3-19
3.5 Turing Machines	3-20
3.5.1 Recursively Enumerable Languages	3-22
3.5.2 Linear Bounded Turing Machines	3-22
3.5.3 Universal Turing Machines	3-22
3.5.4 Multitape Turing Machines	3-23
3.5.5 Nondeterministic Turing Machines	3-23
3.5.6 The $P = NP$ Problem	3-24
3.5.7 The Church–Turing Thesis	3-25
3.5.8 The Halting Problem	3-25
3.6 The Chomsky Hierarchy Revisited	3-26
3.7 Chapter Summary	3-27
4 Markov Processes	4-1
4.1 Why Study Markov Processes?	4-1
4.2 Markov Processes	4-1
4.2.1 Process Diagrams	4-2
4.2.2 Formal Definitions	4-3
4.2.3 Stationary Distribution	4-5
4.3 Hidden Markov Models	4-6

4.3.1	Viterbi Algorithm	4-9
4.3.2	Complexity of the Viterbi Algorithm	4-13
4.3.3	Applications	4-13
4.4	Chapter Summary	4-14

II Logic

5	Logic	5-1
5.1	Why Study Logic?	5-1
5.1.1	An Experiment	5-2
5.2	Definition of a Formal System	5-3
5.3	Propositional Logic	5-3
5.3.1	Language	5-3
5.3.2	Semantics	5-5
5.3.3	Formal System	5-6
5.3.4	Completeness	5-9
5.3.5	Normal Forms of Propositional Formulas	5-9
5.3.6	A “Logical” Anecdote	5-10
5.4	Predicate Calculus (First Order Logic)	5-12
5.4.1	Language	5-12
5.4.2	Semantics	5-17
5.4.3	Formal system	5-19
5.5	Extensions	5-21

III Complex Systems, Chaos and Fractals

6	Cellular Automata	6-1
6.1	Why Study Cellular Automata?	6-1
6.2	Definition of Cellular Automata	6-2
6.3	One-Dimensional Cellular Automata	6-5
6.3.1	Simple Patterns	6-7
6.3.2	Fractals	6-7
6.3.3	Chaos	6-9
6.3.4	Edge of Chaos	6-11
6.4	The Four Classes of Cellular Automata	6-12
6.4.1	Class 1	6-14

6.4.2	Class 2	6-14
6.4.3	Class 3	6-14
6.4.4	Class 4	6-14
6.4.5	Sensitivity to Initial Conditions	6-16
6.4.6	Langton's λ Parameter	6-19
6.4.7	Computation at the Edge of Chaos	6-19
6.5	The Game of Life	6-20
6.5.1	Simple Patterns	6-21
6.5.2	Growing Patterns	6-22
6.5.3	Universal Computation	6-22
6.6	Computation and Decidability	6-25
6.6.1	Langton's Ant	6-25
6.7	Chapter Summary	6-26
7	Dynamical Systems	7-1
7.1	Introduction	7-1
7.2	Definition	7-1
7.3	The Logistic Map	7-2
7.3.1	Point Attractor	7-4
7.3.2	Periodic Attractor	7-5
7.3.3	Strange Attractor	7-7
7.3.4	Bifurcation Diagram	7-7
7.3.5	Fractals	7-8
7.3.6	Sensitivity to Initial Conditions	7-10
7.4	The Lorenz Attractor	7-11
7.4.1	The Butterfly Effect	7-12
7.5	Chapter Summary	7-13
8	Fractals	8-1
8.1	Introduction	8-1
8.2	Measuring the Length of Coastlines	8-3
8.3	Fractional Dimension	8-4
8.4	Example of Fractals	8-10
8.4.1	The Cantor Set	8-10
8.4.2	The Koch Curve	8-11
8.4.3	The Peano and Hilbert Curves	8-13
8.5	L-Systems	8-14
8.5.1	Turtle Graphics	8-15

8.5.2	Development Models	8-17
8.6	The Mandelbrot Set	8-19
8.7	Chapter Summary	8-23
9	Graphs and Networks	9-1
9.1	Examples of Networks in the Real World	9-1
9.2	The discovery of small world networks	9-2
9.3	Some basic concepts for graphs and networks	9-2
9.4	Analytical Approach to an Undirected, Regular Lattice	9-5
9.4.1	Computing the Average Path Length	9-5
9.4.2	Random Rewiring Procedure (after Watts and Strogatz, 1998)	9-6
9.4.3	Random Networks	9-7
9.4.4	Clustering Coefficient (Degree of Clustering)	9-8
9.4.5	Understanding small world networks	9-9
9.5	Growing Networks	9-10
9.6	Analysis of threats	9-14
9.6.1	Network resilience to deletion of nodes	9-14
9.6.2	Percolation models	9-14
9.7	Biological networks	9-15
9.8	“Tipping points”	9-15
9.8.1	The Schelling Model of Segregation	9-15
9.8.2	The Reappearance of “Hush Puppies”	9-16
9.9	Network Motifs: Simple Building Blocks of Complex Networks	9-17
9.9.1	Motifs in Brain Networks	9-19
	Bibliography	A-1
