# Software Quality FS 2017
## Exercise 1 - Discussion

Eya Ben Charrada

charrada@ifi.uzh.ch

**University of Zurich** UZH

# Grading

-, ~, +

# Colony of Chameleons

Estimating the number of states

# Colony of Chameleons

Duration/Probability of change

# Colony of Chameleons
## Safety? Liveness?

**Safety**

> *Something* <span style="color:red">*bad*</span> **never** *happens*

**Liveness**

> *Something* <span style="color:green">*good*</span> ***Eventually*** *happening*

- All chameleons have the same color
- No chameleon are left

# Colony of Chameleons
## Limitations of SPIN

Number of states explodes rapidly.

If the search is not exhaustive, no guarantee to find a violation even within the search range.

# Petri Nets

- t4 fired at least once

- t3 can be fired an infinite number of times

- As soon as p4 recives a token it never gets empty again
